

Got Moles Phone Training — FAQ & Scenario Guide for Muhammad

Built from real calls: 203 transcribed phone calls over 90 seconds, April 30 – July 20, 2026 (every substantive call CallRail has recorded). Frequency counts below are actual counts from those calls, and every example quote is something a real caller said.

The big picture: roughly 60–70% of calls currently hit the AI answering service, which can only take a message — it can't quote prices, schedule, or answer questions. Nearly every question in this guide was asked on a live call, and live calls are where bookings happen. Your job is to be the human who answers on the first ring and can handle everything below.

1. The price sheet — know this cold

(As quoted on calls through July 2026 — confirm current numbers with Spencer before your first shift.)

Option 1 — Quick Fix (one month): ~5 weekly visits, \$150 setup fee charged up front as the deposit. **Residential: \$450 up to 1 acre, \$500 for 1–3 acres, \$600 for 3–5 acres. If no moles are caught, the \$150 is all they pay** — same guarantee at every size. Flat rate no matter how many moles — "from one to a million moles, the price doesn't go up or down."

Option 2 — Total Mole Control (annual): Residential: \$100/month up to 1 acre, \$125 to 3 acres, \$150 to 5 acres. Unlimited visits, no setup fee/deposit, billed the last day of each month. 12-month commitment, auto-renews month-to-month after. Early cancel = 50% of the remaining contract. Spencer's line: *"For \$3 a day, I'll trap the mole for the whole year."*

NO phone pricing for commercial properties (any size) or residential over 5 acres — Spencer bids those in person. Always establish property type (residential/commercial) and approximate size before quoting anything.

Bridge between them: a hesitant caller can start with the Quick Fix, and the \$150 setup fee credits toward the annual program if they convert.

Discounts actually given on these calls: senior/military/veteran ~10–15% (e.g., \$85–90/mo), returning-customer month at \$375, referral = free month per signed-up neighbor, group rates for neighbors (\$85/2 yards, \$75/3, \$50/4–5 per yard), ~\$1,000 for full-year prepay. Spencer volunteers these to build goodwill — ask him how much latitude you have.

2. Top FAQs, ranked by how often callers actually ask

#	Question (as callers ask it)	~Freq	The answer that works
1	"What does it cost?"	22+	Two options, always both, tiered by acreage (see price sheet). Phone quotes for residential up to 5 acres — no assessment visit needed. Commercial or over 5 acres: Spencer bids in person, quote nothing.

#	Question (as callers ask it)	~Freq	The answer that works
2	"How does it work? Traps? Poison?"	16	Trapping only — no chemicals, no poison. Traps are set in active tunnels, covered, staked down, with a bucket/planter over them. Weekly visits to check and reset.
3	"How soon can you come?"	14	Usually today or tomorrow. Speed closes deals — same/next-day offers repeatedly sealed bookings.
4	"What time will you be here?"	13	Never promise an exact time. Script: quote gets approved → route is optimized → customer gets a text with an ETA window (email day-before, text morning-of, text en-route). This answer satisfied every caller who asked.
5	"How do I pay / approve the quote?"	12	Quote arrives by text + email; they tap approve (no DocuSign). Quick Fix: \$150 deposit up front, balance at end of the month. Annual: no deposit, billed last day of month, autopay available.
6	"Do you service my area?"	10	Core: King, Pierce, Thurston counties. Northern edge Kenmore/Bothell/Maltby (Mondays only). Gig Harbor, Belfair, Olympia — yes. Hard NOs: past ~Bremerton in Kitsap, Vashon Island, Snohomish County/Everett/Stanwood (refer out — see §5).
7	"Do I need to be home?"	10	No — just leave gates unlocked. Techs close gates behind them. This reassurance closes deals; volunteer it.
8	"Is that a contract? Can I cancel?"	10	Annual = 12-month commitment, auto-renews, early exit = 50% of remainder. Be straight about it — hiding it loses trust.
9	"Are these moles or voles/gophers?"	10	Mounds or raised tunnels = moles, 100%. Dead-grass streaks and many small open holes = voles. We don't do voles or gophers — refer out. When unsure, have them text photos to the real business cell (the ad number is a Google tracking line that can't receive texts).
10	"The moles came back!"	8	Expected, not a failure: <i>"It's not a question of if they're coming back, it's when."</i> Moles are territorial — when one is trapped, the vacant tunnel network eventually attracts a new one. This is the annual-plan pitch moment. Returning customers get the \$375 rate.
11	"Is it safe for my dog / kids?"	7	Traps are covered, staked down, buckets over them; dead moles are double-bagged and placed in the customer's garbage can — techs only take the mole with them on special request. Customers never have to see them. Tell the kids not to touch. If a trap sits near livestock/horse traffic, flag it for immediate attention (a customer once needed a trap pulled because a neighbor's horse walked there — treat that as drop-everything).
12	"Is there a per-mole charge?" / "\$450 per mole?"	6+	The single most misunderstood thing on the phone. Flat rate regardless of catch count. Spencer's trust angle: per-mole trappers have an incentive to inflate the count — we don't operate that way.
13	"Any discounts?"	5+	See price sheet. Veteran-run company; military/senior discounts land especially well.
14	"How often do you come out?"	6	Quick Fix: weekly for ~5 weeks. Annual: unlimited — proactive perimeter trapping plus call-outs whenever activity shows.

#	Question (as callers ask it)	~Freq	The answer that works
15	" They disappear in winter, right? "	4	Myth — the most common misconception. Moles are active year-round; you just see fewer fresh mounds. Summer watering pulls worms up into irrigated lawns — <i>"you basically rang the dinner bell."</i>
16	" How many moles do I have? "	4	Usually just one — moles are solitary and territorial. Ten mounds is typically one busy mole, not ten moles.
17	" Is killing moles even legal in WA? "	3	Spencer answers this "five times a day" — use his framing: pest-control trapping is legal; the trapping restrictions people remember are about fur-trapping of furbearers. (Stick to exactly this framing — no claims beyond it.)
18	" Do you do weekends / what hours? "	3	M–F, business hours. Phones effectively off 5pm–9am. No weekend visits.
19	" Can someone come look first? "	3	Residential up to 5 acres is priced by phone; work starts once the quote is approved (commercial or 5+ acres: yes — Spencer comes out to bid). If they're unsure it's moles: photos by text, free ID — and the safety net: <i>"If they're not moles and we come out, I'll refund the \$150."</i>
20	" What do you do with the moles? "	2	Double-bagged and placed in your garbage can (taken away only on special request). Customer never sees them.

Also asked at least once: prep before service ("clean up mounds and mow, then leave the yard a couple days so fresh activity shows"), trapping beyond the lawn/greenbelt (lawn + perimeter; protected greenbelts are off-limits), sod/landscaping timing (trap first, then landscape), septic/drain-field damage, bundling two nearby properties, "will you sell my contact info?" (no), and "are you a real person?" (all three GBP listings — Tacoma, Enumclaw, Tukwila — are the same company).

3. The live-call script (Spencer runs this nearly verbatim — learn the arc)

1. **Open:** "What do you got going on out there?"
2. **Qualify:** location → residential or commercial? → property size ("over or under an acre?" — get rough acreage; it sets the price tier) → "**How long have you been dealing with the moles?**" ← this question drives the recommendation
3. **Educate** (this is the conversion engine): moles are territorial and solitary; tunnels work like a net to catch worms; a mole eats ~70% of its body weight daily; watering in summer = dinner bell; no one-and-done fix — "not if, but when" they return. Spencer's own story: his four acres in Enumclaw is where the business started.
4. **Pitch both options:** first-time/occasional problem → Quick Fix as a "benchmark." Fighting them a year or more → skip straight to annual: *"If you've been fighting moles for a year, I'm not even going to tell you about the quick fix."*
5. **Capture:** name, cell, email, address + "**How did you find me?**" (always ask — it's attribution data and a rapport moment)

6. **Close:** text/email the quote → approve → schedule, usually same/next day. Don't chase price-shoppers; hold price, explain overhead (crew, insurance, bonds), leave the door open: they often call back.

Three reassurances that close deals over and over: (1) nobody needs to be home, (2) no chemicals or poison — safe for pets and kids, (3) flat rate, no per-mole games, only \$150 if nothing is caught.

DIY validation: most callers already failed with castor-oil pellets, poison gummy worms, sonic spikes, smoke bombs, or sprays. Don't mock — validate: *"That stuff doesn't work... this industry is full of gimmicks."* Why poison fails: moles smell chemicals — *"imagine you eat wagyu beef every day and I try to trick you with a Beyond Meat steak."* Nothing gets rid of earthworms, so nothing gets rid of the food supply.

4. Scenario playbook (from real calls)

New-customer inquiry — run the script in §3. Most common call type by far.

Existing customer: scheduling/ETA/"tech question" — the AI currently strands these people ("I just need somebody to put me on the list for tomorrow" → hung up annoyed). Answer live, check the schedule, give the notification-flow answer for ETAs. Photos of new activity go by text to the business cell.

Retreatment ("they're back") — normal, expected, warm lead. Returning-customer rate \$375, or bridge to annual. Book fast.

No-show complaint — a missed appointment with no text generated two angry calls from the same customer in one morning. Apologize, reschedule immediately, and flag internally. A proactive text prevents the whole scenario.

Upset caller — rare (2–3 in three months, mostly at the AI, not the company). Let them vent, fix the concrete thing, don't argue.

Out-of-area — refer generously; it builds goodwill: Kitsap → Terry Cotton ("friendly competition, he's a good dude"); north/Snohomish → Kirk at Northwest Mole King; Vashon → honest "nobody serves the island" + DIY advice (Trapline traps / traplineproducts.com).

Voles/gophers — not our pest. Teach the ID rule, offer photo ID by text, refer to Trapline for DIY. Honest disqualification repeatedly earned "I appreciate your honesty."

HOA / property manager / commercial — different vocabulary: unit counts, vendor-compliance waivers, bids, board time windows. Capture requirements and hand to Spencer.

Spousal sign-off — a real close-blocker ("Let me forward this to my husband"). Send the quote to both, follow up next day.

Callbacks on AI-captured leads — the highest-value list you own, and it goes stale fast (one lead called twice on consecutive days because nobody called back). Rules: call back same day; **re-verify the address** (the AI confirmed "3302 Bond Road" twice to a caller saying "302" — caller left swearing); lead with pricing/scheduling since that's what they were blocked on.

Junk calls — vendors (CRM pitches, BBB accreditation), job applicants, pranks, dead air, garbled audio. Log and move on; garbled-audio calls deserve a careful callback since some are real customers.

5. Hard boundaries & house facts

- **Pests:** moles only. No voles, gophers, or general pest work (Rambo, Cascade Pest, Western Exterminator send moles TO us — they're partners, not competitors).
- **Area:** King/Pierce/Thurston. No Vashon, no Kitsap past ~Bremerton, no Snohomish. Kenmore/Bothell/Maltby = Mondays only. Routes are geographic (e.g., Burien Tuesdays, Sammamish Wednesdays).
- **Hours:** M–F business hours; no weekends; phones off 5pm–9am.
- **Methods messaging:** chemical-free, no poisons, safe for pets and children, professional trapping. On the legality question use Spencer's framing only (§2, #17). Never claim "WA's #1."
- **Identity:** all three Google listings (Tacoma, Enumclaw, Tukwila) are the same company. Veteran-owned. "219+ five-star Google reviews" is the safe claim.
- **Hazard notes:** anything a customer says about septic lines, irrigation, livestock, locked gates goes in the CRM as an impossible-to-miss note *before* scheduling.

6. Watch-outs with the systems

- **AI intake transcripts lie:** it garbles the company name (DotMoles, Gumballs, Gotmold...), mishears names and addresses, and logs wrong cities. **Re-verify every detail on callback.**
 - **CallRail's "customer city" field is often flat wrong** (shows Atlanta/Boston for local callers) — trust only what the caller says.
 - The ad phone number is a Google tracking number that **cannot receive texts** — photo ID requests go to the real business cell.
-

Source data: `data/calls.jsonl` (203 transcripts). Every count and quote traces to a real call — ask Claude to pull any full transcript by topic or date if you want to hear how a scenario actually played out.
