

Jobber for Muhammad — Create the Client, Send the Quote

For: Muhammad · **Date:** 2026-08-05 **Scope:** two new jobs — build the client record, send the quote. **Not yours:** scheduling a **brand-new** customer once their quote is approved. That goes to Cory. Your existing-customer booking (the address lookup, the zip route day, everything in `2026-08-03_service-day-scripts.md`) is unchanged — see Step 5.

Everything below is how the Got Moles account is actually set up — the line-item names, the quantities, the deposits, all of it comes from the last 40 real quotes in the account. Match these exactly and your quotes look identical to Spencer's.

The whole job in one line

Search first → build the client → build the quote → send it → tag it for Cory.

That's it. Five steps. The rest of this doc is the detail inside each one.

Step 1 — Search before you create. Every single time.

Before you type a single new client, search the name, then search the phone number, then search the street address. Three searches. Ten seconds.

Why this is rule number one: the account has 4,366 clients and an audit in July found **97 duplicate groups — 114 extra records**. Twenty-three of those groups were **full record plus full record**: someone in the office manually created a client who was already there. That's the exact mistake you're in a position to make, and it's the expensive one — the customer's whole service history, their past quotes, their notes, all of it ends up split across two records and nobody can see it.

How to search properly in Jobber:

Search this	Because
Last name	Catches "Bob Smith" vs "Robert Smith"
Phone number, digits only	Catches CallRail stubs with no name yet
Street number + street name	Catches spouses under different last names

What you'll often find instead of nothing:

- **A record with just a phone number and no name.** That's a CallRail stub — the phone system created it when the call came in. **Do not create a new client. Fill that one in.** This is the single biggest source of duplicates in the account.
- **A full record from years ago.** Great — that's a returning customer. Use it, and they may be owed a **Repeat Customer Discount** (see Step 3).

If you're not sure whether the record you found is the same person — stop and ask. Merging is fixable. A split history is a mess.

Step 2 — Build the client record

Fill in all of it. A half-filled record turns into someone else's problem later.

Required, every time

Field	Get it right
First and last name	Full last name, spelled back to them
Phone	Mobile if they have one. Leave " Allow SMS " checked — arrival texts go out on this
Email	Read it back letter by letter. The quote goes here — a wrong email is a quote that never arrives
Property address	Street, city, ZIP. The ZIP is what decides which day the tech comes
Lead source	How they found us — Google, ChatGPT, referral, saw the truck, repeat

Two things that are easy to get wrong

Billing address vs. property address. If the mail goes somewhere else — a rental, a second home, a property manager — put the service location in the **property** and the mailing address in **billing**. If they're the same, leave billing alone; Jobber copies it.

Company vs. person. If the caller is a business, an HOA, or a property manager, set the record up as a **company** with the business name, and put the human as the contact. Don't file a landscaping company under the name of whoever happened to call.

Tags

The tags in use on real records right now:

TMCP - Active · Schedule requested · Schedule booked · Commercial Property · Commercial Client · LARGE PROPERTY · Autopay · paid in full · noreview

The Voice Assist - * tags are put on automatically by the phone system. Don't add or remove those.

Your tag is Schedule requested — see Step 5. Ask Spencer before inventing a new tag; a one-off tag nobody else uses is invisible.

Step 3 — Build the quote

3a. First: are you even allowed to quote this one?

Ask two questions on the call, before any number comes out of your mouth:

1. **Residential or commercial?**
2. **Roughly how many acres?**

Then:

Situation	What you do
Residential, 5 acres or under	Quote it. Table below
Residential, over 5 acres	Do not quote. In-person bid
Commercial — any size at all	Do not quote. In-person bid

Bids go to Cory. Not Spencer — Spencer does no bids, residential or commercial. Take the details, tell them someone will come out and walk the property, and hand it to Cory.

Never guess a price to fill a silence. A number you make up is a number we have to honor. "Let me have Cory come walk it" is always a safe answer.

3b. The prices

The Quick Fix — one month, weekly visits

Property size	Price	Deposit
1 acre or under	\$450	\$150
1–3 acres	\$500	\$150
3–5 acres	\$600	\$150

The \$150 is a setup fee, collected upfront, and it's covered by the no-catch guarantee: if we catch nothing, that setup fee is all they ever pay.

Total Mole Control Program — year-round

Property size	Monthly	Quote total (12 mo)
1 acre or under	\$100/mo	\$1,200
1–3 acres	\$125/mo	\$1,500
3–5 acres	\$150/mo	\$1,800

TMCP is a **12-month commitment**, billed monthly.

3c. How to build each one in Jobber

Pick the line item from the product list — **don't type a custom line.** The product carries the full description (what's included, customer responsibilities, the guarantee) and that description is what the customer reads on the quote. This is why you leave the **Title** and **Message** fields **blank** — the product does the talking. Every recent quote in the account has both blank.

Quick Fix

Line item: The Quick Fix – One-Month Mole Control Program
Quantity: 1
Unit price: 450 (or 500 / 600 by acreage)
Deposit: 150

TMCP

Line item: Total Mole Control Program -- Year round protection
Quantity: 12 ← twelve, one per month
Unit price: 100 (or 125 / 150 by acreage)
Deposit: 0 ← no deposit on TMCP
Total shows as: 1,200

The quantity of 12 is the part people get wrong. TMCP is quoted as twelve months, not as one line of \$100. If your TMCP quote totals \$100, you left the quantity at 1.

If they want to see both options

Build **two separate quotes** on the same client — one Quick Fix, one TMCP — and send both. That's a normal, good outcome, and it happens in the account regularly. A caller who asks for both is a caller who's deciding, not a caller who's leaving.

3d. Discounts — read this part twice

Discounts go on as their **own line item, with a negative unit price.**

⚠ Always check the total after adding a discount

A discount line only takes money off if its unit price is **negative**. If you add a discount and the total goes **up**, the minus sign is missing — put it in front of the unit price.

Military and First Responder were both saved wrong in the account (stored as +\$50, so they *added* \$50 to a quote). **Fixed 2026-08-05** — both are now -\$50. But check the total anyway. It takes one second and it's the difference between a correct quote and a quote that charges a veteran an extra fifty dollars.

And match the quantity to the program line:

On a...	Discount quantity	Meaning
Quick Fix (qty 1)	1	One-time amount off
TMCP (qty 12)	12	Per-month amount off, for twelve months

Real examples from the account:

- Quick Fix \$450 + Military Discount, qty 1, **-\$50 → \$400**
- TMCP \$100 × 12 + Repeat Customer Discount, qty 12, **-\$15 → \$1,020**
- TMCP \$100 × 12 + Senior Discount, qty 12, **-\$10 → \$1,080**
- TMCP \$100 × 12 + Neighboring Property Discount, qty 12, **-\$50 → \$600**

Notice the same discount is a different number depending on the program — Repeat Customer is -\$75 once on a Quick Fix, but -\$15 per month on a TMCP. **The saved default is a starting point, not the answer.** If you don't know what a discount should be on a particular quote, ask Spencer before you send it.

One that is NOT a discount line: Friends and family

Friends and family is \$250, and it's positive on purpose. It's a replacement price, not a subtraction — you use it *instead of* the Quick Fix line, not underneath it.

```
Line item:  Friends and family
Quantity:   1
Unit price: 250           ← positive. This IS the price.
```

Don't add a Quick Fix line as well, and don't make it negative.

Who gets what — confirm with Spencer before applying any of these on your own: Military, First Responder, Senior, Repeat Customer, Neighboring Property (when we're already servicing next door), Friends and family.

Step 4 — Check it, then send it

Before you hit send, four things:

1. **Is the total right?** Quick Fix = the tier price. TMCP = monthly $\times$ 12. If a discount made it bigger, fix the sign.
2. **Deposit right?** \$150 on Quick Fix. \$0 on TMCP.
3. **Is the email right?** Look at it once more. This is the one mistake that silently loses the customer — the quote goes nowhere and everyone assumes they ghosted us.
4. **Title and message blank?** Yes. Leave them.

Then send by email. Jobber adds the terms automatically — *"This quote is valid for the next 30 days"* — you don't type that.

Tell them what to expect before you hang up:

"I've just sent that to your email — it'll come from Got Moles. Open it up and there's a green Approve button at the bottom. Once you approve it, we'll get you on the schedule."

That sentence does real work: they know what to look for, they know it's from us, and they know approving is the next step.

Step 5 — Hand it to Cory

Jobber tells you when the customer opens the quote and when they approve it.

When a quote comes back approved:

1. Tag the client **Schedule requested**
2. Tell Cory — approved quote, which program, the city and ZIP

A newly approved quote is Cory's to schedule. You don't pick the day, you don't promise a date. If they ask when we're coming:

"Cory handles getting new customers on the schedule — he'll be in touch to lock in your first visit."

This does NOT change your existing-customer booking

The booking rules you already have — in `2026-08-03_service-day-scripts.md` — still stand for customers who are already on the books. Someone calls asking when we're next coming, or needs a visit moved, or is on file with nothing scheduled: that's still you, off the address lookup, on the zip's route day. Nothing about that changed.

The split is simple:

Who's calling	Who schedules
Existing customer — next visit, reschedule, nothing booked	You , off the lookup
Brand-new customer whose quote just got approved	Cory

If you're ever unsure which side of the line a call falls on, it's a new customer if this is their first service with us. Ask Spencer if it's genuinely murky.

The follow-up

A quote that's been sitting **unopened for 2 days** is worth a short call: *"Just checking that quote landed in your inbox — sometimes it goes to spam."* Often it did go to spam, and that call is the whole sale.

A quote **opened but not approved** is a different call. They read it and stopped. Ask what gave them pause — that's a real question with a real answer, and usually it's price or "I want to talk to my husband/wife." Both are workable.

Stop and ask — don't guess

Come get Spencer (or Cory for bids) for any of these:

- Commercial, any size
- Residential over 5 acres
- Anyone asking for a discount you haven't been told they get
- A customer who says they're already a customer, and you can't find their record
- Anyone who's unhappy, disputing a charge, or asking to cancel
- Any price that isn't in the table above

Nobody has ever been in trouble for asking. Wrong prices go out the door and become promises.

The card

	Quick Fix	TMCP
≤1 acre	\$450	\$100/mo
1–3 acres	\$500	\$125/mo
3–5 acres	\$600	\$150/mo
Quantity	1	12
Deposit	\$150	\$0
Over 5 acres / any commercial	Bid — Cory	Bid — Cory

Search before you create • Quantity 12 on TMCP • Check the total after a discount • Check the email • New approved quote → tag `Schedule requested` , tell Cory

Existing customers still book with you, off the address lookup. Unchanged.
