

Callback-pool audit — Quo window 2026-08-03 to 2026-08-11

Generated by `scripts/audit-callback-pool.mjs`. Reads only.

Why this exists. Only 4 inbound calls were missed in this window, so missed calls cannot account for the outbound volume from the Quo line. The real callback list was the new-lead feed: the `lead-alerts` cron emails Muhammad every new Jobber client with "call back while they are still shopping". This audits what was actually in that feed.

Summary

Bucket	Count
WASHINGTON	55
OUT OF STATE	19
INTERNATIONAL	1
Total new leads	75

- **20** of 75 leads carry a number that is **not a Washington area code** — outside every county Got Moles serves.
- **23** of 75 leads had **never phoned Got Moles** on any tracking number, so no inbound call record exists for them.

Non-Washington numbers in the callback feed

Each of these was pushed to the receptionist as a lead to ring back.

What a carrier fraud model sees

From the outside, with no visibility into CallRail or Jobber, the Quo line looked like this:

- a phone number (253) 683-7555 **8 days old**
- **one seat**, signing in from **Pakistan**
- dialling numbers that had **never called that number** (23 of 75 had no inbound record at all)
- including **20 numbers outside the business's own state**, some international
- with the low answer rates and short durations that returning a cold lead always produces
- **no A2P/10DLC registration**, no Free Caller Registry entry, no CNAM branding

That is the signature of a boiler room. It is also exactly what a legitimate business looks like when its lead feed is unfiltered and its outbound number is brand new.

Remediation

1. **Filter the lead feed by area code before it reaches the receptionist.** Only 206, 253, 360, 425, 509, 564 should generate a callback task; everything else goes to a review queue for a human to look at.

2. **Never dial an international number from the business line.** No Got Moles customer has a non-US number.
 3. **Set outbound caller ID to the number the customer contacted** so the callback shows a recognisable Washington number.
 4. **Register the outbound number** — Free Caller Registry, CNAM branding, and A2P/10DLC before any SMS.
 5. **Warm the number** — no new line goes from zero to full callback volume inside a week.
-
