

Quick Fix Overrun Audit

Run: 2026-08-11 · **Source:** Jobber, all live (non-archived) jobs · **Read-only — nothing was changed**

The Quick Fix is a five-week weekly program. This report lists every open Quick Fix job with a sixth visit or beyond — delivered or already on the calendar — ranked from most visits to least.

Summary

MEASURE	COUNT
Live jobs swept	817
Open Quick Fix jobs	117
Jobs past the 5-visit series (delivered or booked)	20
Jobs that have already had more than 5 visits	11
Total visits beyond week 5	60
— already delivered	31
— still scheduled ahead	29
Combined program value of these 20 jobs	\$8,700

Product is identified by the job **line item**, not `jobType` — every Got Moles job is RECURRING, Quick Fix included. Jobs carrying both a Quick Fix and a Total Mole Control line item were excluded as conversions.

Shape of the book

Across all 117 open Quick Fix jobs, total visits scheduled:

VISITS ON THE JOB	JOB
4	2
5	95
6 (over)	9
7 (over)	4
8 (over)	2
9 (over)	1
10 (over)	1
12 (over)	1
14 (over)	1
17 (over)	1

95 of 117 sit at exactly five. The program holds for the large majority. The overrun is concentrated in the twenty jobs below, and over half the excess sits in the top four.

Ranked list — most visits to least

#	JOB	CLIENT	HAD	TOTAL	BEYOND 5	MEDIAN GAP	FIRST VISIT	LAST DONE	NEXT BOOKED	VALUE

19	#8228	Matt Vega	4	6	+1	6d	2026-07-24	2026-08-10	2026-08-17	\$450

#	JOB	CLIENT	HAD	TOTAL	BEYOND 5	MEDIAN GAP	FIRST VISIT	LAST DONE	NEXT BOOKED	VALUE
20	#8271	Craig Nelson	3	6	+1	7d	2026-07-31	2026-08-10	2026-08-17	\$300

#7964 Barbee Mill HOA is a different animal. It carries a Quick Fix line item at \$1,000 but runs on a 28-day cadence with ten more visits scheduled out — a commercial account priced and structured as monthly service under a Quick Fix label. It tops the table on raw visit count but it is not a weekly-series overrun. Excluding it, the ten true weekly overruns account for 29 delivered visits beyond week 5.

Two jobs were created oversized rather than overrun. #8228 Matt Vega (4 delivered of 6 booked) and #8271 Craig Nelson (3 of 6) have a sixth visit on the calendar before the fifth has happened — a setup problem at job creation, not a series that ran long. Worth checking how the recurrence was built.

#8151 Chuck Blevens (not in this table) is the only one of 117 open Quick Fix jobs that stopped cleanly: 5 of 5 delivered, no sixth booked, sitting in `requires_invoicing`. That is the correct end state.

Visit-by-visit detail

Every visit on each job, in date order. Visits 1–5 are the program the customer bought; **visit 6 onward is the overrun** and is flagged in the Beyond column.

Method

- Swept every job in a live Jobber status (`active` , `upcoming` , `today` , `late` , `on_hold` , `action_required` , `requires_invoicing` , `unscheduled`). Archived jobs are excluded: a closed Quick Fix correctly ends with nothing upcoming.
- Product classified from the line item (`quick fix`), with `total mole control` used to exclude conversions.
- "Had" counts a visit as delivered if it is marked complete **or** its date is in the past — a past visit never marked complete still consumed a week of the series.
- Median gap is the median days between consecutive visits on that job, used to confirm the series really is weekly.
