

Google Ads API Tool — Design Document

Route Ready (routereadykits.com) • Internal advertiser tool • July 2026

1. Overview

Route Ready sells digital business-template kits for route-based service businesses (cleaning, pressure washing, lawn care) at <https://routereadykits.com>. This document describes a small internal automation tool that manages **our own single Google Ads account** via the Google Ads API. The tool is not a product; it is not offered to clients or the public, and no third parties access it or its data.

Item	Value
Company / website	Route Ready — https://routereadykits.com
Manager account (MCC) holding the developer token	143-307-0544 ("Route Ready Manager")
Managed advertiser account (only one)	763-085-7815 ("Route Ready")
Google Cloud project	route-ready-ads (project number 377890328473)
API contact email	routereadykits@gmail.com
Users	Internal only — the business owner and the owner's scheduled automation jobs

2. Architecture

The tool is a set of Node.js scripts that run on the owner's workstation, either manually or on a local scheduler (weekly review job). There is no hosted service, no public endpoint, and no multi-tenant component.

- **Auth:** OAuth 2.0 installed-application flow. A refresh token is generated once for the manager account login and stored locally in an environment file on the owner's machine. Requests use the developer token from MCC 143-307-0544 with `login-customer-id` set to the MCC.
- **Transport:** Direct REST calls to `googleads.googleapis.com` (current API version; GAQL via `googleAds:search`, mutations via the standard `:mutate` services). No SDK, no third-party wrapper.
- **Scope:** All calls target customer 763-085-7815 exclusively.

3. Features

- **Campaign management:** create and maintain Search campaigns, ad groups, responsive search ads, and sitelink/callout assets for our kit and guide pages.

- **Keyword hygiene:** add/pause keywords; maintain shared negative keyword lists (our niche needs extensive negatives to exclude unrelated queries).
- **Budget guard:** read daily spend and enforce a fixed monthly cap (US\$75/month) by pausing campaigns if the cap is reached.
- **Reporting:** weekly GAQL reports (impressions, clicks, cost, conversions per campaign/keyword) rendered into a local markdown digest for the owner.
- **Conversion upload:** upload our own first-party purchase conversions (click-id based) from our checkout provider's sales records.

4. Sample report output (CLI)

```
$ node ads-report.mjs --last 7d
Campaign          Impr   Clicks   Cost    Conv
Search – Cleaning Kit    1,204    38   $21.40     2
Search – Pricing Guides    870    22   $11.05     1
Total                2,074    60   $32.45     3
Monthly cap: $75.00 – spent to date: $54.20 (72%)
```

5. Data handling & compliance

- Only our own account's advertising data is accessed. No client, public, or third-party access of any kind.
- Reports are stored locally on the owner's machine; nothing is resold, redistributed, or exposed via any API or UI.
- No Required Minimum Functionality obligations apply (internal advertiser tool, single account), but standard API terms, rate limits, and policy requirements are followed.
- Credentials (developer token, OAuth client secret, refresh token) are stored in a local, non-committed environment file readable only by the owner.
